KEEP THE CONTROL & SAVE MONEY

SPARE PARTS

GTC maintains an unparalleled global inventory for the systems discontinued or obsoleted, by the OEM. These components significantly lengthen your system's operational life, reduce costs, and decrease the risk of forced outages and downtime.

FIELD SERVICE

Our comprehensive Field Services include Health Checks for Turbine Control Panels, Excitation & LCI, Troubleshooting & Outage Support, TIL Review & Implementation, HMI or <l> Replacement-in-Kind, EEPROM Backup Service and NERC Compliance Testing. GTC developed the Control Major Inspection (CMI) applicable to Mark VI/Vle, EX2100/2100e, and LS2100/2100e.

EXTEND™ WARRANTY

Our product tracking methods, Test & Certification analysis, and optional EXTEND™ warranty program help you get the highest quality and most value of your initial GTC investment.

This program allows you to extend your warranty up to three additional years*, meaning lower costs, less hassles and fewer headaches.

TESTING & REPAIR

Our Test & Certification and Repair Services, available for many of the product lines we sell, include a detailed Technical Report and Warranty Certificate, with an unmatched certification period of up to six years.

TRAINING

GTC offers a variety of courses led by our world-class instructors and practicing field engineers. You have the option of predefined seminars or fully customized classes to suit your needs.

LONGEVITY™

With our Longevity™ Program, operators secure the continued reliability of their original systems through GTC's industry-leading supply of Spares, Repairs and Services for their Turbine Controls, Excitation, Vibration Monitoring, Fire Protection, LCI, Flame Scanners, and HMIs.

ASSET RECOVERY

If your original system doesn't have the current features you require, GTC can upgrade your technology! We want to help you maximize the value of your controls equipment and save money over the long-term.

Do you have a Mark II or Mark IV? GTC is the leader in upgrading to Mark V, a good solution at a fraction of the price for a new system from the OEM.

In addition, GTC developed the Pareto Analysis (80/20 rule) for GE controls. We can help you identify and plan the critical parts to keep in stock so your system can keep running!
