

# DO YOU GET AN ANNUAL PHYSICAL?

## WELL, YOUR PANELS NEED ONE TOO.

*Available for Mark IV, Mark V, Mark Ve,  
Mark VI, Mark VIe, Excitation and LCI Systems*

GTC looks at the current alarms, alarm log and hardware. Quite often, these do not tell the full picture (patients tend to lie). This is why we thoroughly discuss the case with the next of kin (a.k.a. Operator, I&C Technician, or Plant Engineer) to identify potentially, or already, troublesome situations that may go undetected.

GTC's Health Check is a 2-day on-site procedure for one unit. For multi-unit sites, please consult your GTC Representative.

Finally, you will receive a comprehensive report covering the state of the controls, with helpful tips and recommendations to enhance their operability, availability and life expectancy.
