Defective Original Mark VIe I/O Packs Did You Know?

Certain I/O packs sold by the OEM ship with **POOR QUALITY** components and **FAIL** shortly after installation.

We know the affected Serial Numbers, Manufacturing Dates and, of course, **HOW TO FIX IT.**

Avoid an expensive unit trip or a non-functional spare -- Call GTC for more information.

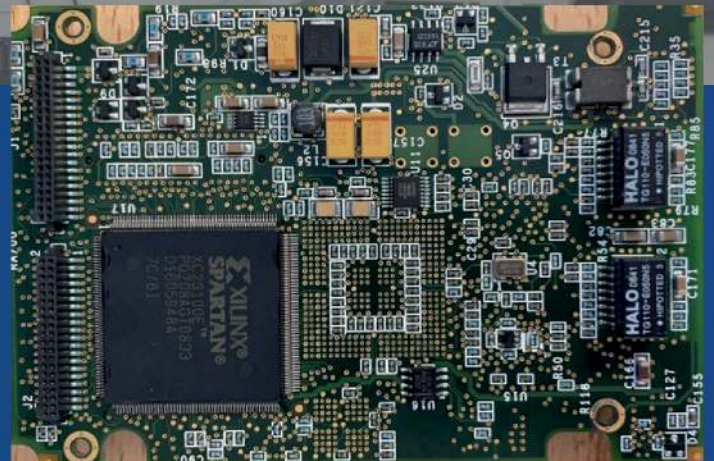

Here's What We Know!

Failed components are easy to spot/detect and replace with our Service Center's specialized technicians.

Components that have not yet failed but are prone to an early failure are a completely different story.

At GTC we know the Mark VIe I/O Pack range of Manufacturing Dates and Serial Numbers affected by below-par components, which components, where to get good quality replacements, and more.

We do not just replace the components, GTC does full functional tests of cards in our live Mark VIe panels before returning it to you with a professional report and an industry leading 3-Year Warranty.
